

Facilities Committee Minutes

May 17, 2012 – 7:30 AM

Central Office

Present: Alan Walton, Lou Ensel, Deb Keller, Dave Richards, Patrick Manuel

Minutes:

Jeff Larimer from Harriman Associates was invited to the meeting to share what services his firm offers to help school districts understand their facilities and building needs. Jeff explained that most districts conduct educational programming research which involves calculating the square footage and dividing this by the number of pupils. This would allow us to better understand how we are utilizing our facilities. The types of educational programs a district offers may impact the square footage to pupil ratio.

School districts may also request a facilities analysis which would examine facilities in the areas of mechanical, electrical, structural, and plumbing.

The district will begin to revisit floor plans and meet with principals/directors to gain an accurate picture of what the space is being used for in our facilities, as well as a rough idea of our square footage/number of pupils.
